CCD视觉识别技术历程

激光·智能化 / 刀片·智能裁
SMART LASER & KNIFE CUT SYS

CCD Visual Recognition Overview

光博士于2008年，面向全球推出非金属柔性材料加工的首代CCD智能视觉识别系统。随着技术的创新与迭代，视觉识别家族也日渐壮大。针对不同应用场景和材料特性，可选配搭载不同视觉识别系统。CCD、SCCD、SSCCD、LCCD、3DCCD等多类视觉定位系统。

In 2008, GBOS launched the first generation of CCD intelligent visual recognition system for processing non-metal material to the world. With the innovation and iteration of our technology, the visual identity family is also growing, and now it can be equipped with different visual recognition systems according to different application scenarios and material characteristics,, such as CCD, SCCD, SSCCD, LCCD, 3DCCD and other visual positioning systems

多模板定位

Multi- template positioning

根据图档自动查找并匹配切割材料，实现多种图形、任意角度同时定位切割

Automatically locating and match cutting material based on files to achieve multi-patterns and any-angle positioning cutting at the same time.

多点定位

Multi-features positioning

根据识别图形的特征点，从而自动鉴定图形切割边缘，达到沿边切割与大尺寸图形定位切割

According to the features recognized, thus automatically recognize patterns and cut edges, so as to achieve cut along the edges and large size patterns positioning cutting.

沿边提取

Extract along the edges

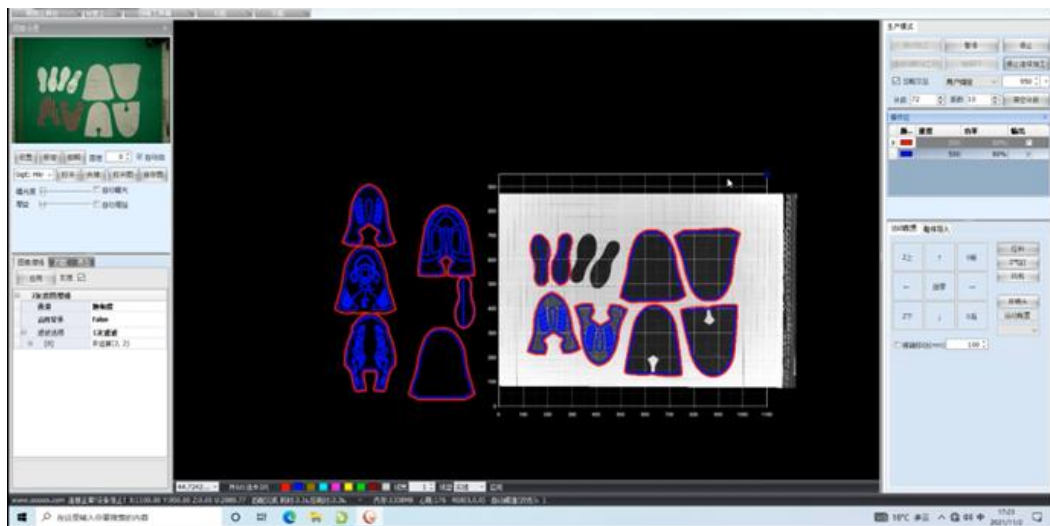

根据图形的边缘颜色区别，自动捕捉并提取边缘切割线或定位特征点，调整切割轮廓，达到自动寻边切割的效果，避免切割中出现大小边的问题

according to the difference of edge color of patterns, automatically capture and extract edge cutting lines, adjust positioning features, reach an auto edge cutting result.

多模板定位功能

Multi-pattern simultaneous positioning function

根据图档自动查找并匹配切割材料，实现多种图形、任意角度同时定位切割。
Automatically match pattern according to file, realize simultaneous positioning and cutting of various pattern and any angle

沿边提取功能

Cutting by extract along the edge function

根据图形的边缘颜色区别，自动捕捉并提取边缘切割线或定位特征点，调整切割轮廓，达到自动寻边切割的效果，避免切割中出现大小边的问题。

According to the color difference of the edge of the graphic, automatically capture and extract the edge cutting line or locate the graphic feature to adjust the cutting contour to achieve cutting along by the edge, which will avoiding the problem of cutting edge with different size

变形匹配

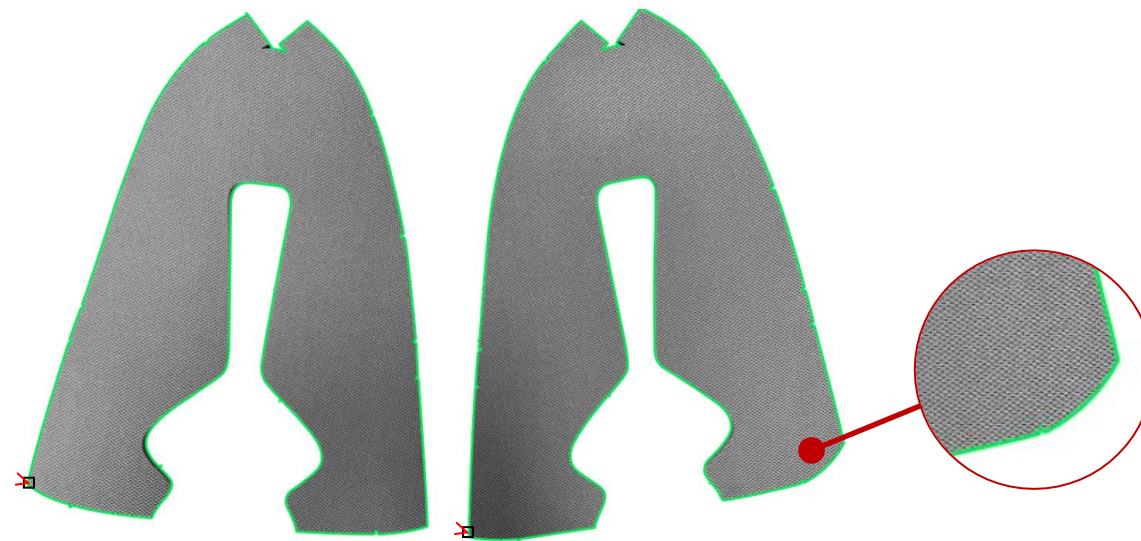

Deformation matching

切割路径根据材料变形情况进行相似度调节和智能匹配

Similarity adjustment and intelligent matching of cutting paths according to material deformation

模板定位
Template positioning

常规匹配
Regular match

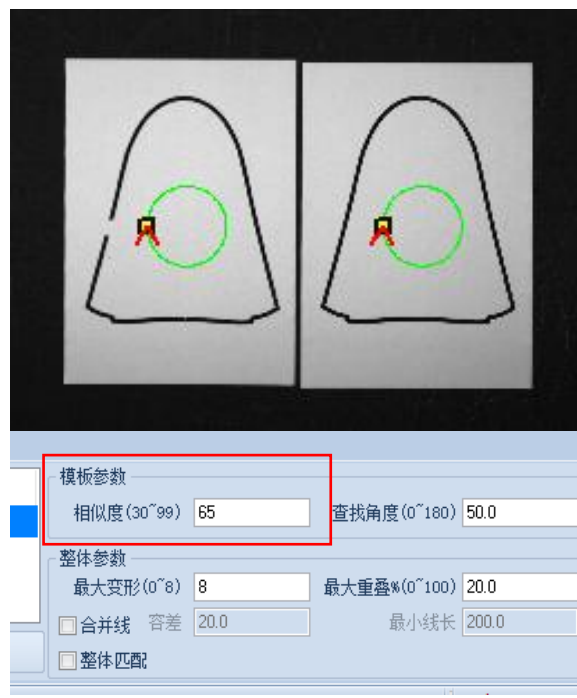

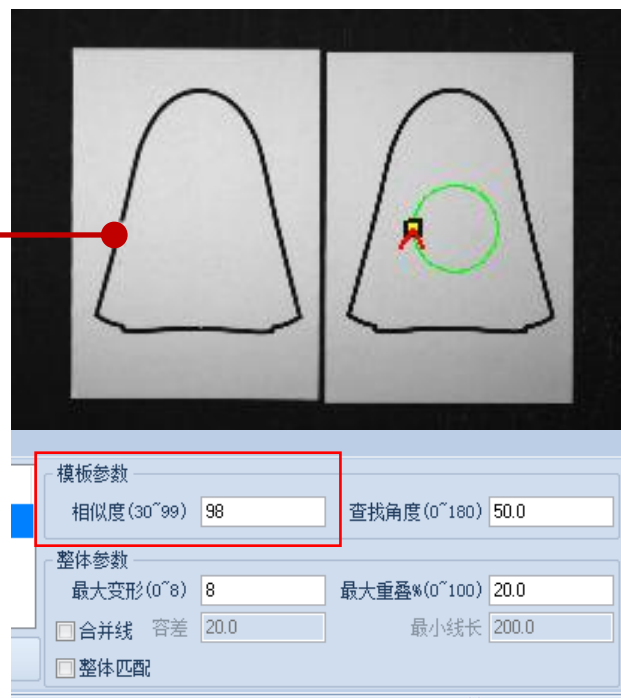

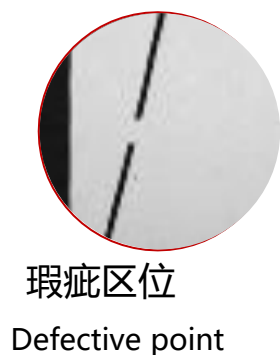

变形匹配
Regular match

自动识别不良品

Automatically identify defective products

通过设定产品的差异率（0~100%可调），自动识别不良品，减少人工作业流程。

By setting the product variance rate (adjustable from 0 to 100%), it can automatically identify defective products and reduce manual work processes.

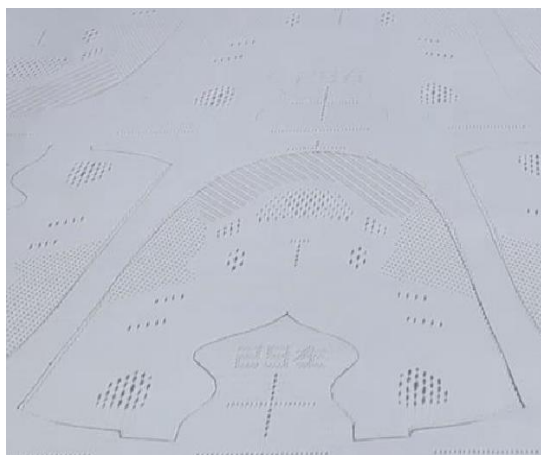

内缩外扩

Zoom in and Zoom out

通过设置合适的提边参数，轻松应对同色系材料识别难题。

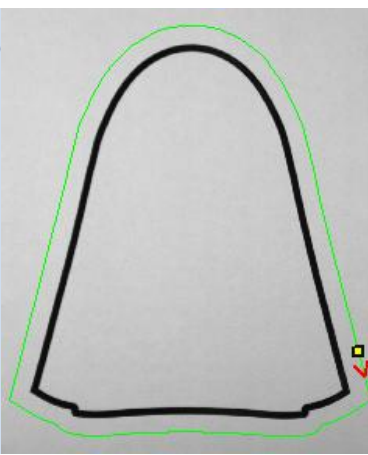

By setting appropriate edge parameters, it is easy to solve the difficult identification of materials of the same color.

大面积自动提边

Automatic edge recognition for large size materials

可实现一次性识别工作台面上的所有材料，解决大幅面材料识别切割的问题

It can realize one-time identification of all materials on the working area, and solve the problem of identification and cutting of large size materials.

售后服务

After-sales Service

激光·智能化 / 刀片·智能裁
SMART LASER & KNIFE CUT SYS

定期回访工厂（技术支持及培训、维护保养），总部技术交流及培训服务

Regular visits to the factory (technical support and training, maintenance), headquarter technical exchange and training services

全球售后支持（设立90多个代理商及经销商售后服务网点）

Online and On site After-sale Service Available Globally

(Set up more than 90 agents and distributors after-sales service outlets.)
